

## **Interim cruise report no: 09.06.2020, 28.09.2020-16.10.2020, Jnr. 20/8635**

The final analyses and results from the Swedish Skagerrak Survey 2020q4 are not yet available. The following interim report no. **09.06.2020, 28.09.2020-16.10.2020, Jnr. 20/8635** is part of the fulfillment of the conditions to enter Norwegian zone with the research vessel F/V Rossö and F/V Svanen given by permit “20/8635”. Final results are to be presented in the ICES working group IBTSWG in 2022.

### **Participants**

F/F Rossö with skipper Niklas Sterner and crew and from SLU Aqua: Roger Larson and Jan-Erik Johansson (28/9 – 7/10).

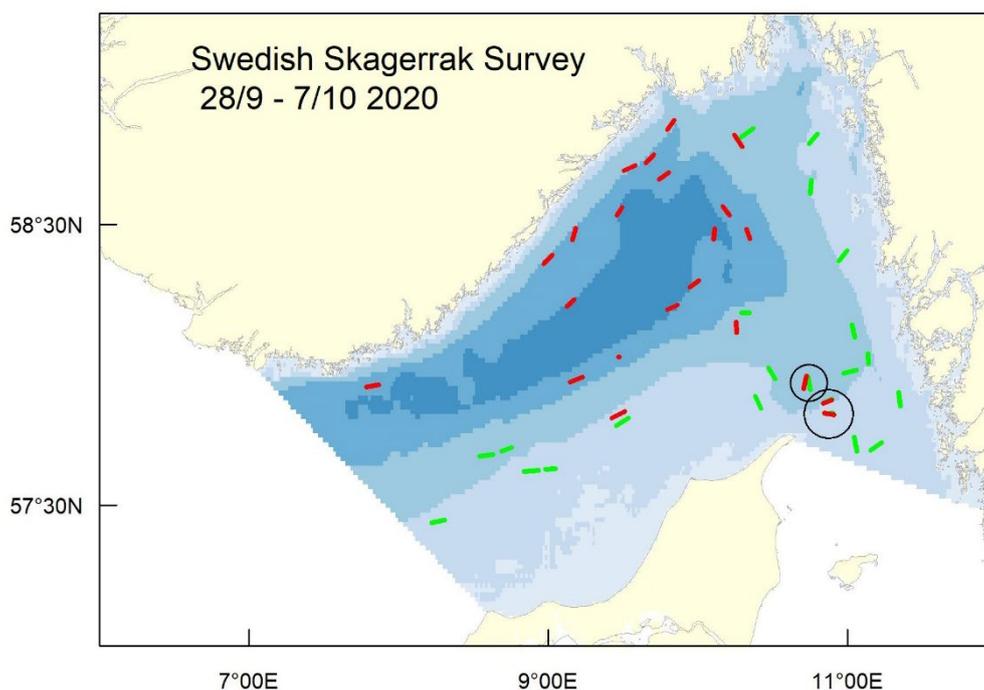

F/F Svanen with skipper Stefan Larsson and crew, and from SLU Aqua: Baldvin Thorvaldsson (appointed cruise leader, 28/9 – 7/10), Peter Johannessen (28/9 – 2/10) and Magnus Andersson (5/10-7/10). The scientific leader, Patrik Börjesson, did not participate at sea during the cruise.

### **Objectives**

The survey is an initiative to supplement the data collection carried out in the international bottom trawl survey during the third quarter (IBTS Q3). By expanding the geographical area and sampling in the deeper parts of the Skagerrak, data on species that are not currently covered by IBTS will also be collected. The survey is a so-called fishermen survey, i.e. knowledge and experience within the commercial fishery is used in the design and implementation of the survey. The data collected will be analysed together with data from the IBTS to generate distribution maps and biomass estimates for stock assessment and environmental evaluation at national and international level.

### **Itinerary**

The chartered fishing vessels F/V Rossö and F/V Svanen left port in the evening 2020-09-27. From 2020-09-28 to 2020-09-30 F/V Rossö fished mostly in Danish waters at 100-250 m depth and F/V Svanen fished in Norwegian waters. By the end of the first week two parallel hauls were carried out northeast of Skagen on the way back to port. During the second week most of the fishing took place in the central and eastern Skagerrak. An additional parallel haul was carried out by the end of the week. The distribution of trawl stations are shown in Figure 1. Additional haul information are presented in Table 1.

**Figure 1.** Map showing trawl stations in Skagerrak 2020 fished by F/V Rossö (green tracks) and F/V Svanen (red tracks). The locations for parallel hauls 2020-10-01 and 2020-10-07 are marked with circles.

### Achievements

During the cruise in 2020, 44 valid hauls were made, of which 19 were located in the Norwegian part of the Skagerrak. The total catch was 11.2 tonnes and included 47 fish species. The most common species, measured by occurrence, were hake, cod and witch flounder, but the largest catches were greater silversmelt (2.3 t) and roundnose grenadier (1.9 t), followed by cod (1.6 t) (Table 2). Seven species of elasmobranchs were caught during the cruise (Table 3). Age and individual weights were collected for 868 specimens of cod, additional weights were collected for 1045 specimens from 21 other species. Genetic samples were collected from 0-group cod and starry ray.

**Table 1.** Station list for the Swedish Skagerrak Survey September 28 – October 7 2020.
