Foreword:

In this publication, the Norwegian Directorate of Fisheries presents key figures from the Norwegian Aquaculture industry in 2016. The Directorate of Fisheries provide main part of the statistical material in this report, but some statistics is by external sources.

The report contains information about all species farmed in the Norwegian Aquaculture industry. Information is in four groups. One group contains information about Atlantic salmon and Rainbow trout. Another group contains information about other marine fish species, a third group contains information about molluscs, crustaceans and echinoderms and finally the fourth group contains information about algae.

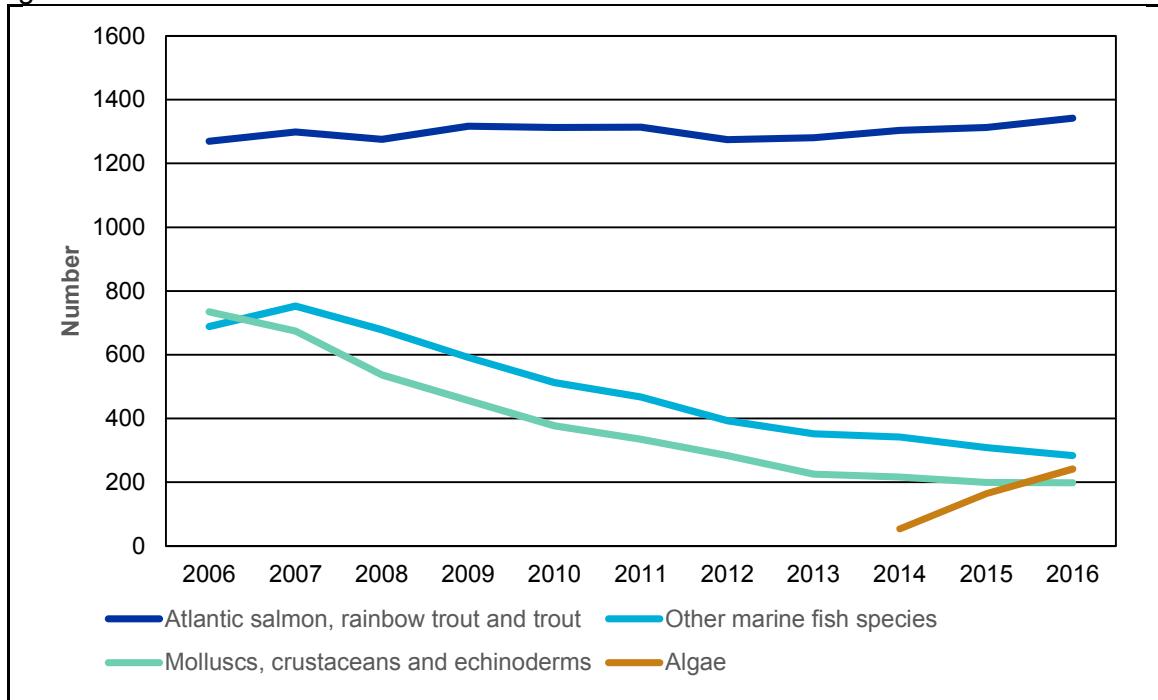

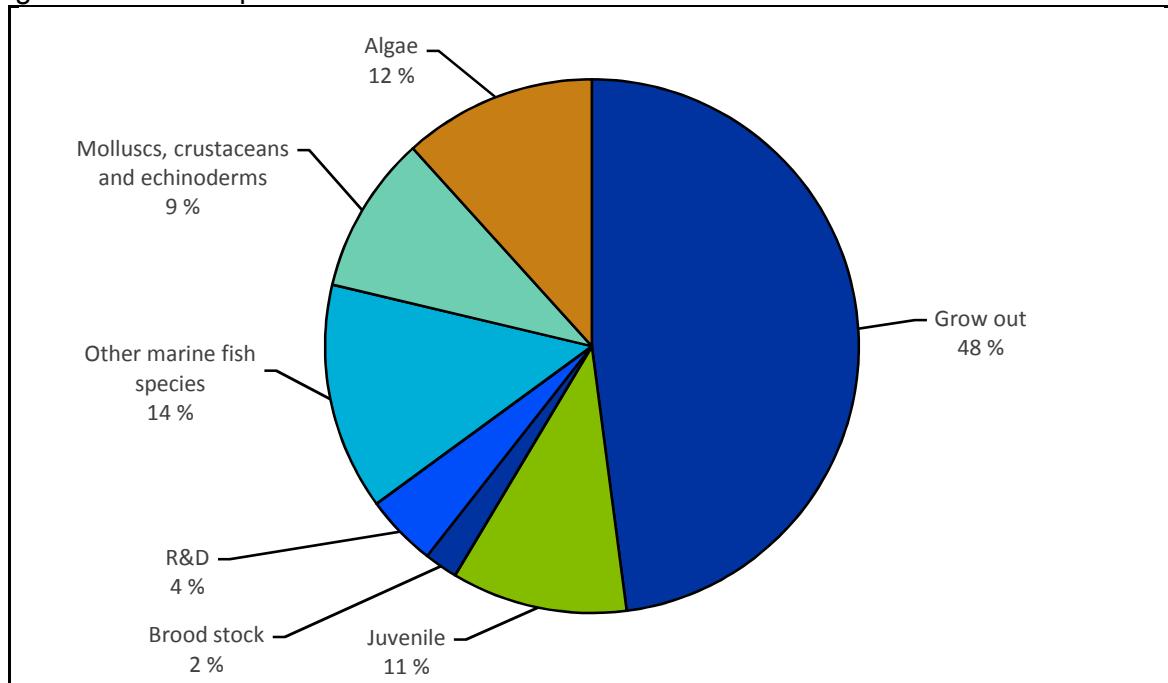

Figure 2. Licences per 31 December 2016

Be aware that grow out production, juvenile, brood stock and research (R&D) are licenses for production of Atlantic salmon, rainbow trout and trout.

The licenses for marine fish species, molluscs, crustaceans and echinoderms are comprised of several species. In Table 3. licenses are counted several times. The total number of licenses in Table 3 is therefore higher than the total number presented in Table 2.

6. Losses in the production

Source: The Directorate of Fisheries

Definitions:

- Dead fish: Number fish physically taken out of the bag-net. Cause of this type of death could be illness, wounds etc. without clearly specifying the cause.
- Turn out from slaughterhouse: Number of fish discarded at slaughterhouse due to maturity, defects, blemishes etc.
- Escapes: Number of fish that have escaped in conjunction with an accident.
- Other losses: Number of fish lost due to predation, theft and other causes.
- Counting mistakes: Number fish adjusted according to original outset numbers.
